EinsteinAAAto meet the challenge before us our notions of cosmology and of the general nature of reality must have room in them to permit a consistent account of consciousness. The work of these scientist [cited] suggested that this was a capacity neither abnormal nor rare, but present in every human being. We were far more than we realized.
EinsteinAAAAs most fundamental axiom wasn't correct: at a certain level of matter, things could travel faster than the speed of light. Bryan Hubbard attempts to answer the big questions about what all these new discoveries meant to daily existence.Zero Point PerceptionSeven lessons demonstrating that we can access information beyond space

McTaggartThereAAAAs a revolutionary new view of the world emerging. Cataloging her personal journey into the exploration of how to show consciousness affects matter, Lynne McTaggart does an exemplary job of showing the science that supports the notion that physical matter reality can be profoundly affected by cohesive thoughts through the
subatomic world that encompasses nonlocality.McTaggart herself explains:eAAANonlocality shattered the very foundations of physics. A lot of science. Fortunately, The Field, by investigative journalist Lynn McTaggart, is just one of those books.The Field is not simply a great book because it allows individuals to see the latitude of reality from a much
wider vantage point through the quantum vibrational field of life, but because it supports it with science. This it greatly improves all areas of our lives, communication and self-knowledge to our interaction with our material world. The world, in its most basic, existed as a complex web of interdependent relationships, forever indivisible. "In the first
look, the fact that the reality of physical matter can be affected by non-physical matter may seem strange, even crazy, except that this notion has been studied extensively and with surgical accuracy for some time. In fact, researchers like cell biologist Bruce Lipton, a researcher of consciousness and former NASA physical Tom Campbell,
Psychoenergetic Scientist and Materials Science and Engineering Professor at Stanford University, William A. Vice-versa, our notions of consciousness must have room in them to understand what it means for their content to be 'reality as a whole. The most beautiful thing we can experience is the mysterious. You will discover how to create children
(or grandchildren) with spirit, create special extra-norcial communication with animals, connect with the energies of the Earth and find the purpose of your true life. Plus, there are dozens and dozens of Exercises in all lessons, so you can dive into experimental learning and switch to a happier and more accomplished way of being. Consider a unique
course at the next stage of your human evolution. There are three ways to start Living in the field. Science would no longer reduce us to our smallest common denominator. 2S well, as consciousness affects reality is also vital because the wide set of experiments researched and discussed by McTaggart." [Ter] helped validate alternative medicine,
which demonstrated to function but has never been understood. To truly understand the deeper implications of this, begin by delving into The Field, and you will not only be seeing the larger tapestry from which to view reality, but how the vibrational quantum zero-point field of energy is there for the taking, waiting to be employed by
everyone.And once you see that, you will see how your view of reality changes, allowing you to not only feel empowered, but to know you are empowered, and therefore act empowered. If we could finally work out the science of medicine that treats human energy levels and the exact nature of the eAAAenergyAAA that was being treated, the
possibilities for improved health were unimaginable.eAAA3On just that line of thought, a stellar and incredibly empowering book discussing how individuals can improve their health through epigenetics and quantum biology has been written by researcher Sayer J., author of Regenerate eAAA Unlocking Your BodyeAAAAs Radical Resilience Through
The New Biology. Learn More A~A People see what they are prepared to see.eAAAeAAA Ralph Waldo EmersonAAAThe most beautiful thing thing we can experience is the mysterious. From any given vantage point, how consciousness affects matter is arguably the most powerful, and yet severely underrated subject in all media, even in alternative

media.
